### 7.1 Description:

The Meyerhoffer Farm is located on Harney Road in the vicinity of Emmitsburg, Maryland. The principal elevation of the dwelling house faces east with the gable roofline running north to south. The property also includes a brick bank barn and a one story stone summer kitchen, both contemporary to the house, and a new garage and board and batten shed.

Built circa 1845, the 2 story house is constructed of 7:1 common bond brick and rests on a stone foundation. The gable roof of standing seam tin has two interior end brick chimneys which are decorated with a raised row of bricks. There is a molded box cornice with dentillation.

The main (east) elevation has a symmetrical 5 bay facade. The center door has a molded lintel with dentils and a 1 light transom. Windows are 6/6 with the same lintel treatment as the door. There is a pedimented entry porch with dentils in the pediment. The west elevation is three bays wide with 6/6 window openings with corner block lintels. A one story open porch with metal columns and a shed roof of standing seam tin extends to the last bay where the brickwork projects out to the porchline. The last bay has one 6/6 window. The north and south gable ends have 2 symmetrical bays wide with two 4 light attic windows and 6/6 windows with corner block lintels on the other floors. The south gable end also has a door and a window in the basement level.

The one story stone summer kitchen is situated several feet to the west of the house. The gable roof is covered in wood shingles. It has large stone quoining and a center brick chimney. The 2 bay main facade, facing east, has been covered with a board and batten enclosed porch. The west elevation has 4 light fixed windows in the upper half story and 6/6 windows on the first floor, symmetrically placed. A one bay wide board and batten addition extends to the south. The gable ends are one bay wide. The building was modernized and converted into office space.

The brick bank barn, located to the east of the house, rests on a stone foundation and is comprised of 4:1 common bond brick. The banked section faces north and has a recessed entry bay with sliding doors. The two projecting bays have square patterned ventilators. The south elevation has a vertical sided jetty overhang. On the ground level, stall doors are placed between brick piers. The west elevation, facing the house, is the most decorative facade. Beneath the gable peak, it has two side diamond ventilators with a diamond pattern in glazed headers in the center. The upper story level has a "sheaf of wheat" (X) patterned ventilator and two square ventilators, set with headers. The main level has three square ventilators with solid rows of stretchers and open rows of headers. Two doors in the foundation level have gauged arches. The east gable end has the same ventilator patterns as the west except for the glazed header diamond pattern. It also has randomly placed glazed headers in two courses. The barn is no longer utilized for agricultural purposes.

### 8.1 Significance:

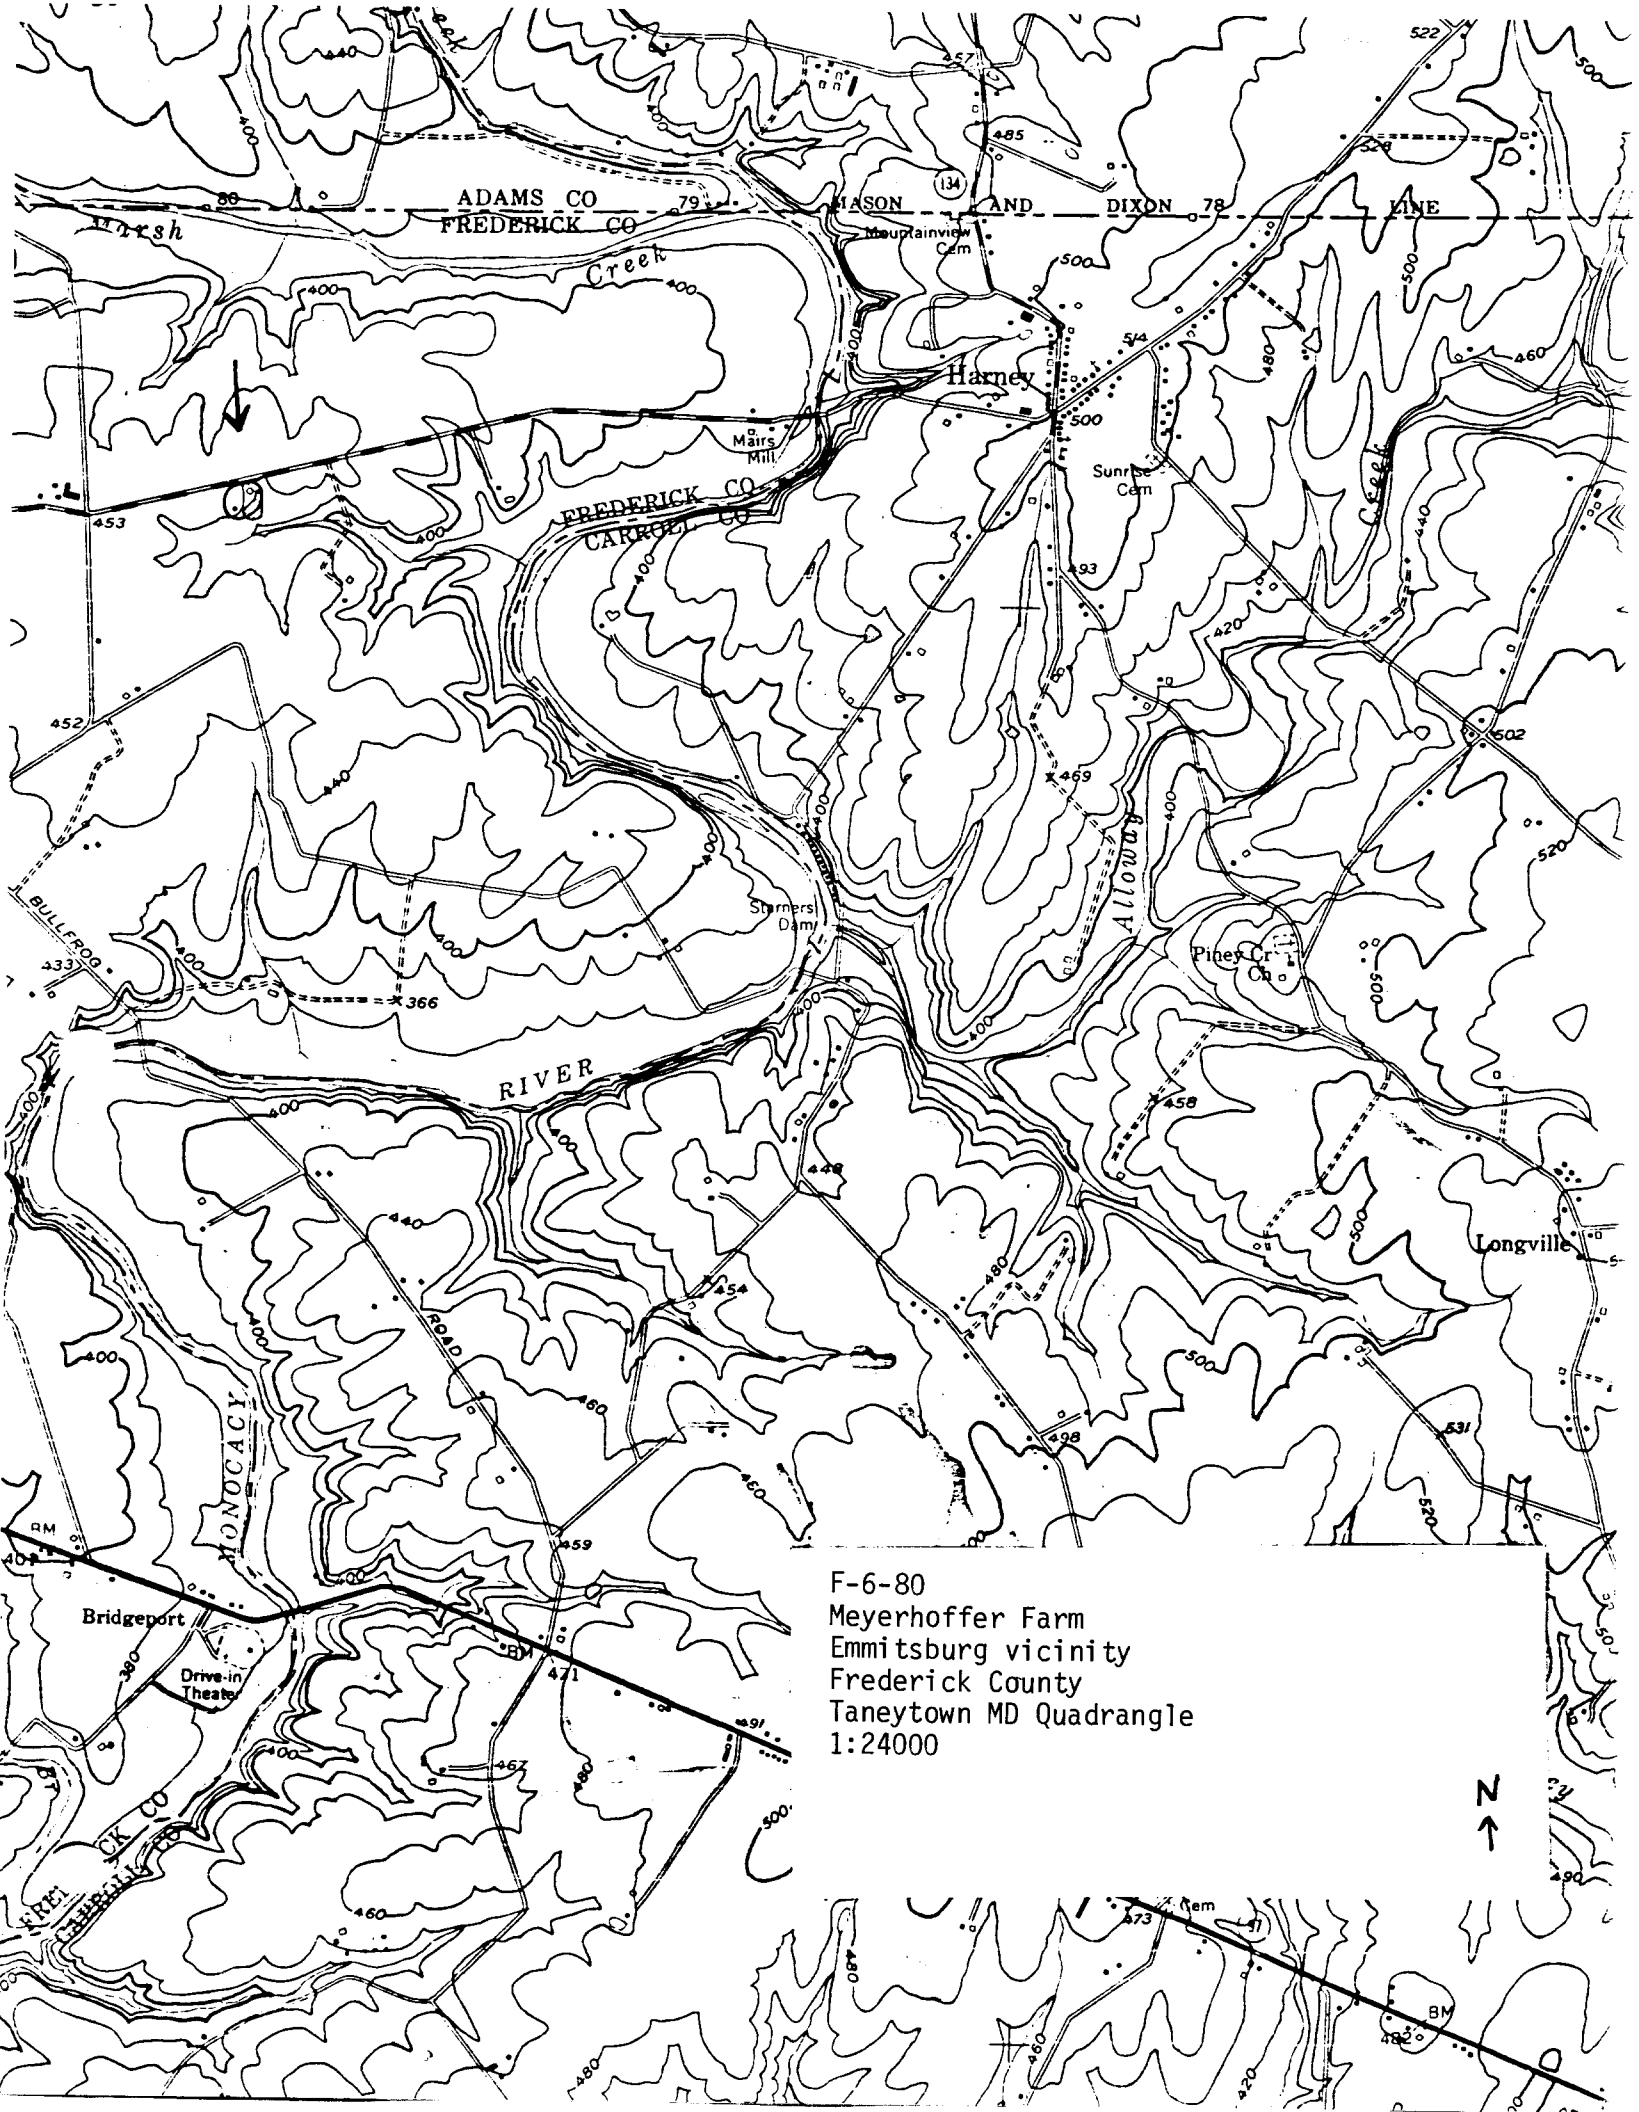

The Meyerhoffer Farm is significant in representing substantial brick architecture in the region. Through the detailing evident in the house and the bank barn, the farm shows careful execution of brick architecture in an area otherwise dominated by simple, vernacular buildings. The patterned ventilators in the bank barn are particularly important in connecting the farm to nearby Pennsylvania building traditions.

Within its historic context, the Meyerhoffer Farm serves as one of the finer examples of 2 story, 5 bay brick houses with details such as the molded lintels with dentils. The integrity of the building is greatly preserved. The barn is one of the few of its type in the region and is more commonly seen in Pennsylvania. It also has a high level of integrity and shows important craftsmanship in the patterned ventilation.

The Meyerhoffer Farm was probably constructed by 1840. The farm was owned by William Walker in 1858 and S. Rhoades in 1873. The proximity of the farm to Pennsylvania explains architectural influences evident in the buildings that appear unusual for the area. These Pennsylvania-German influences are particularly noted in the patterned ventilation of the brick bank barn. Although the English introduced Pennsylvanians to decorative brick construction, it has become largely associated with Pennsylvania-German building traditions (Arthur and Witney, The Barn, 102).
